

Scientific Laboratory Consulting

We offer the scientific and technical expertise to support analytical lab strategy in clinical trials from protocol optimization through regulatory submission, including oversight of routine and complex labs, and validation of assays.

Challenge: As medicine has become more personalized and more evidence is required to establish safety and efficacy of new therapies through clinical trials, ensuring your sample collection strategy is not only optimized, but also overseen, is critical. This strategy must further consider a clinical trial environment that has grown increasingly complex, with many barriers to participation for both sites and patients. Some bioassay strategy challenges include:

- Complicated protocols with extensive lab sample collection may create unintended barriers to patient participation
- Overly complex biosample requirements lead to issues with site protocol compliance
- Use of biospecimens for analyses on multiple assays requires logistical consideration and an understanding of testing requirements
- Management of numerous, lab specific technical details:
 - Development of new assays, technical transfers, and assay validations and qualifications
 - Coordination of efforts across multiple specialty laboratories
 - Changes to the sample analysis plan, requiring change management of downstream activities at multiple organizations to ensure proper implementation
 - Unique and evolving regulatory considerations

Solution: LabConnect offers you a consulting model providing a uniquely qualified Laboratory Scientific Consultant who becomes a member of your study team. Our expert serves as scientific and technical expert to perform operational review of the protocol analytical plan development with a focus on ensuring optimized data endpoints to support safety and efficacy. All this while considering simplified biosample requirements to ease patient participation and site workload. As the study progresses, the Scientific Bioassay Consultant provides oversight of method development, tech transfer, and validations ensuring scientific integrity and adherence to the protocol and applicable regulations.

The addition of a Laboratory Scientific Consultant to analytically complex studies has demonstrated a significant reduction in time and cost for assay development, validation, and reporting.

Support that
speeds things up.

Reduction in time to
assay development
and validation

→ About LabConnect

LabConnect improves lives by partnering with pharmaceutical and biotech companies, and contract research organizations (CROs), to accelerate the development of new medicines around the world. An independent, global, one-stopshop focused on delivering central laboratory services that are tailor-made, timely and flexible to meet the evolving study demands from traditional to increasingly complex trials.
