

# Acceleration Through Customization

## LabConnect's clinical trial lab kits save time and ensure sample integrity

Let's face it. Lab Kits can be laborious. Assembling, labeling, and organizing multiple lab kits for multiple patients for multiple clinical trials can lead to collection errors, missed samples, and loss of data integrity.

**No delays. Just grab and go.** At LabConnect, we do all of the lifting by providing pre-assembled kits that come in the correct order, pre-labeled, by visit. We can also deliver custom kits to sites on a fast-track basis to accelerate your overall project timeline. Whether your trial is traditional or the most complex, just tell us what you need, and we'll quickly develop and produce lab kits to meet the unique specifications necessary to maintain your samples' integrity.

### Rated #1 for ease of use.

When kits are easy to use it's difficult to make errors:

- Control of identifiers
- Bespoke supplies for specific project needs
- Prelabelled, separated, in sequence to save time and minimize errors

LABCONNECT

## Your kits. Your way. Our speed.

Acceleration? Accuracy? Sample Integrity? Yes! Here's how our tailored lab kits maintain your desired conditions without fail.

- Clinical trial lab kits are custom-built to meet the unique needs of your protocol
- Collection and shipping materials are included for each visit
- Ambient, refrigerated, frozen (to -150°C), and combination options available
- Customized and pre-formatted air bills to minimize paperwork
- Customized laboratory requisition forms to meet protocol and visit requirements
- Customized and pre-labeled collection tubes to minimize error
- Contents wrapped in order of use to save time
- Customized manual provided for specimen collection and handling instructions
- Resupply kits are processed with a 10-business day turnaround time and supply-only orders can be processed in 5-business days. Expedited requests are also supported.

→ **Real acceleration. Real results.** A client reached out with an urgent request to help fast-track their study. They needed kits on site in 8 weeks, or their study would be put at risk. LabConnect worked closely with them to set an aggressive timeline that required all parties to work in lockstep. Not only were we able to complete the setup in record time, but we also began delivering custom kits to sites in Week 7. This accelerated the overall project timeline and helped the client successfully achieve their drug development milestones.

**About Us:** LabConnect delivers Central Laboratory Services and Functional Service Provider Solutions tailored to meet your critical clinical trial milestones. For 20+ years, we have helped organizations like yours handle the increasingly complex requirements of the drug development process without missing a beat.
